

Lumedic Connect

Patient Registration & Insurance Coverage

When individuals check-in for healthcare appointments, they typically present their identity and insurance credentials – most commonly a government issued ID card (e.g. drivers license) and a physical insurance card. But these two pieces of plastic don't contain all the information necessary for healthcare providers to treat the patient or get paid for their services. For that to happen, a complicated, time consuming, and manual process takes place which inconveniences individuals and burdens healthcare organizations.

Improved Member Experience

Lumedic Connect allows the same process to be completed digitally from a user's mobile device. This new pattern is what people are used to in almost every other area of their lives – with a few taps on their smartphone, they are checked-in, registered, and forms are completed. What's different about this technology – something called digital credentials – is:

- Only the information necessary for the function is requested.
- The personal information stored in credentials are under the control of the user.
- The user sees what information is requested and can approve or decline sharing it.

The experience is simpler, faster, more transparent, and more private than today's model, leaving individuals feeling safe and happy.

Lower Costs

Receiving accurate and current information from the individual, without the need for 3rd party verification services and EHR integrations, cuts down on cost and operational inefficiency, while improving accuracy and speed. Revenue Cycle Management functions benefit from fewer issues and activities driven by inaccurate and incomplete data obtained during registration.

Controlled by the Individual

At Lumedic we've built a platform that allows individuals to share health information quickly and privately with businesses or healthcare organizations. Lumedic Connect gives the individual control of their health information, letting them decide what they share, when, and with whom. With Lumedic Connect, individuals have a safe and easy way to manage their health information, and it's all in one place – their own personal device.

Individuals, healthcare organizations, businesses, and communities are all connected. With Lumedic Connect, those connections become a network for people to feel more confident sharing health information safely, securely, and privately.
