

Proving Your Vaccination Status

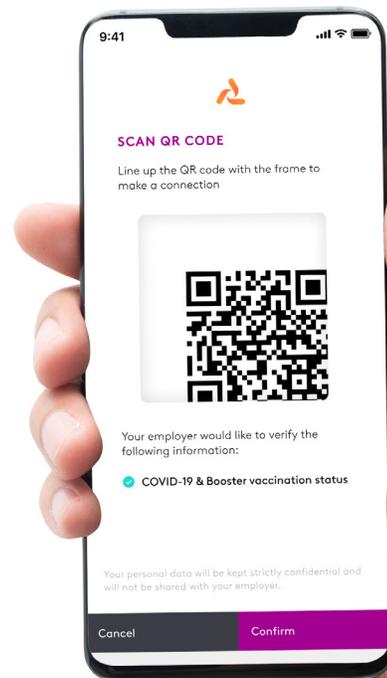

Proving that you've had a vaccination is something nearly everyone has to do at some point in life, whether for work, travel abroad, military service, or school. Yet demonstrating your vaccination status can be a challenge. Many people do not have an exact record of vaccinations across their lifetime. Others have one or more handwritten documents, which can be difficult to confirm and are easy to lose.

In the wake of the COVID-19 pandemic, the need for valid and accessible vaccination records is more pressing than ever. Proving that you have had a COVID-19 vaccination (once available) could be necessary for access to work, travel, or even attending sporting events and other large gatherings.

Paper-based evidence of your COVID-19 vaccination won't be enough for today's digital economy. Vaccination cards, long the method of choice for proving vaccination status, are not secure, are easily counterfeited, and present challenges for digital security protocols and workflows.

Lumedic Connect offers a novel, secure, and private way to prove your vaccination status. With Lumedic Connect, you use your mobile device to receive, carry, control, and share credentials about your vaccination records.

Credentials that are trustworthy.

How it works

First, an individual downloads the Lumedic Connect app to their smartphone. Once the vaccine has been administered, the individual receives a unique vaccination record securely on their smartphone where it rests encrypted and behind device biometrics. The individual is then able to present proof of vaccination with any organization they choose by either showing their digital vaccine pass or scanning a QR code as part of an organization's safety screening protocol.

This system lets people answer targeted health questions while preserving individual privacy, and ensures that the authenticity of the presented information can be trusted by the requesting organization.

Trusted by Healthcare

When healthcare organizations need patient, customer, or employee vaccination information, they use Lumedic Connect to make the specific information request. The organization verifies the individual's credentials, which Lumedic Connect facilitates, so they can confidently make critical business and healthcare decisions.

Extensible for Business

Businesses can easily request proof of vaccination from individuals while avoiding the need to manage individual health information. As businesses work to establish protocols needed for a safe reopening, Lumedic Connect makes it possible for employees and customers to share vaccination information that is sensitive yet necessary.

Controlled by the Individual

Lumedic Connect lets people share vaccination information quickly and privately with businesses or healthcare organizations. It gives the individual control, letting them decide what they share, when, and with whom. With Lumedic Connect, people have a safe and easy way to manage their vaccination records, and the information is all in one place, on their own personal device.

Individuals, healthcare companies, businesses, and communities are all connected. With Lumedic Connect, those connections become a network for people to feel more confident sharing health information safely, securely, and privately.
